Combat and civilian solutions

Individual First Aid Kit MV-1

- MEDCLOT hemostatic drape
- Israel Trauma Bandage
- CAT tourniquet
- Hydrogel dressing (Chest Seal Vented)
- CPR Face Shield
- Plaster UNIPORE 3cm x 5m
- Str. Adhesive wound dress 6x10 cm
- Antiseptic 150 ml, spray
- Thermal blanket
- Nitrile gloves
- Scissors
- Pen
- First aid bag, MOLLE type
- List of products
- Recommendations for the use of the products
- Card of the victim of the established sample

Individual First Aid Kit MV-2

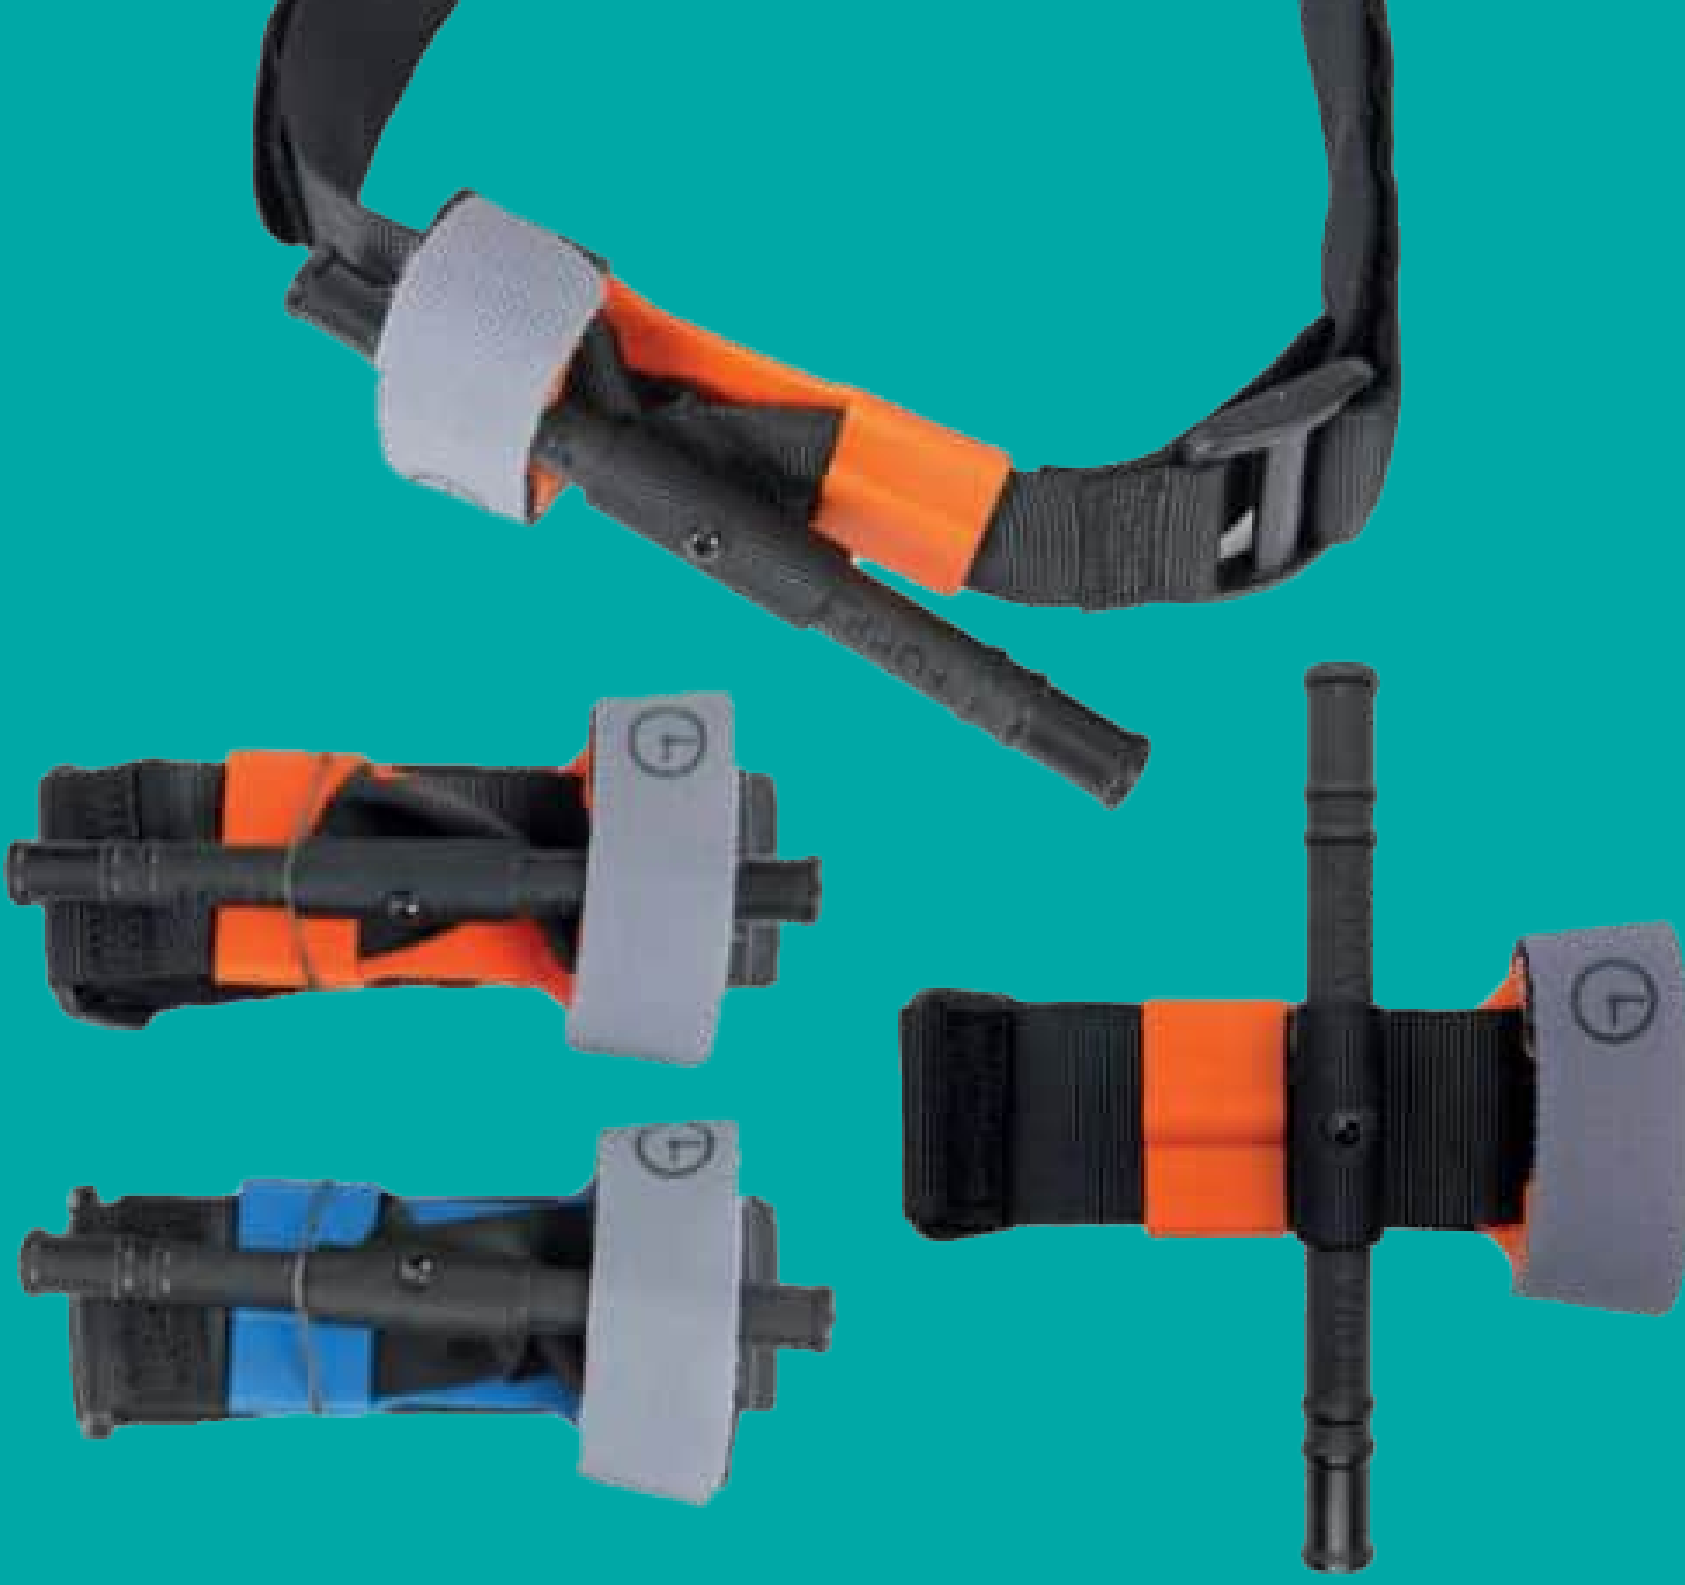

- MEDCLOT hemostatic drape
- Israel Trauma Bandage
- CAT tourniquet
- Hydrogel dressing (Chest Seal Vented)
- CPR Face Shield
- Decompression needle
- Burnshield Dressing 200x200 mm
- Plaster UNIPORE 3cm x 5m
- Str. Adhesive wound dress 6x10 cm
- Bandage 14 cm X 7.5 m
- Antiseptic 150 ml, spray
- Thermal blanket
- Emergency splint
- Nitrile gloves
- Scissors
- Pen
- First aid bag, MOLLE type
- List of products
- Recommendations for the use of the products
- Card of the victim of the established sample

FR19® Extremity Tourniquet Gen-2 is used to control bleeding in the upper and lower extremities. It has the feature of being the first and only tourniquet produced 100% locally in Turkey.

The Emergency Bandage or Israeli bandage is a specially designed, first-aid device that is used to stop bleeding from hemorrhagic wounds caused by traumatic injuries in pre-hospital emergency situations.

In the field, near 40% of trauma-related deaths occur due to bleeding or its consequences.

In a crisis, seconds matter: death by bleeding from a gunshot or blast happens in just a few minutes and saving lives needs fast, targeted action.

MEDCLOT Hemostatic provides a bleeding control system that addresses bleeding scenarios from Traumatic injuries. Administered with manual pressure, MEDCLOT promotes clotting within minutes to help save more lives.

It is extremely safe as botanicals that will cause allergic reactions and animal/vegetable/human proteins are not used in the special formulation used. Kaolin and Carboxymethylcellulose, which are used as active ingredients, are already widely used in the pharmaceutical and cosmetic industry.

In COMBAT CLOT we use mix of Kaloin and Chitosan as active ingredients.

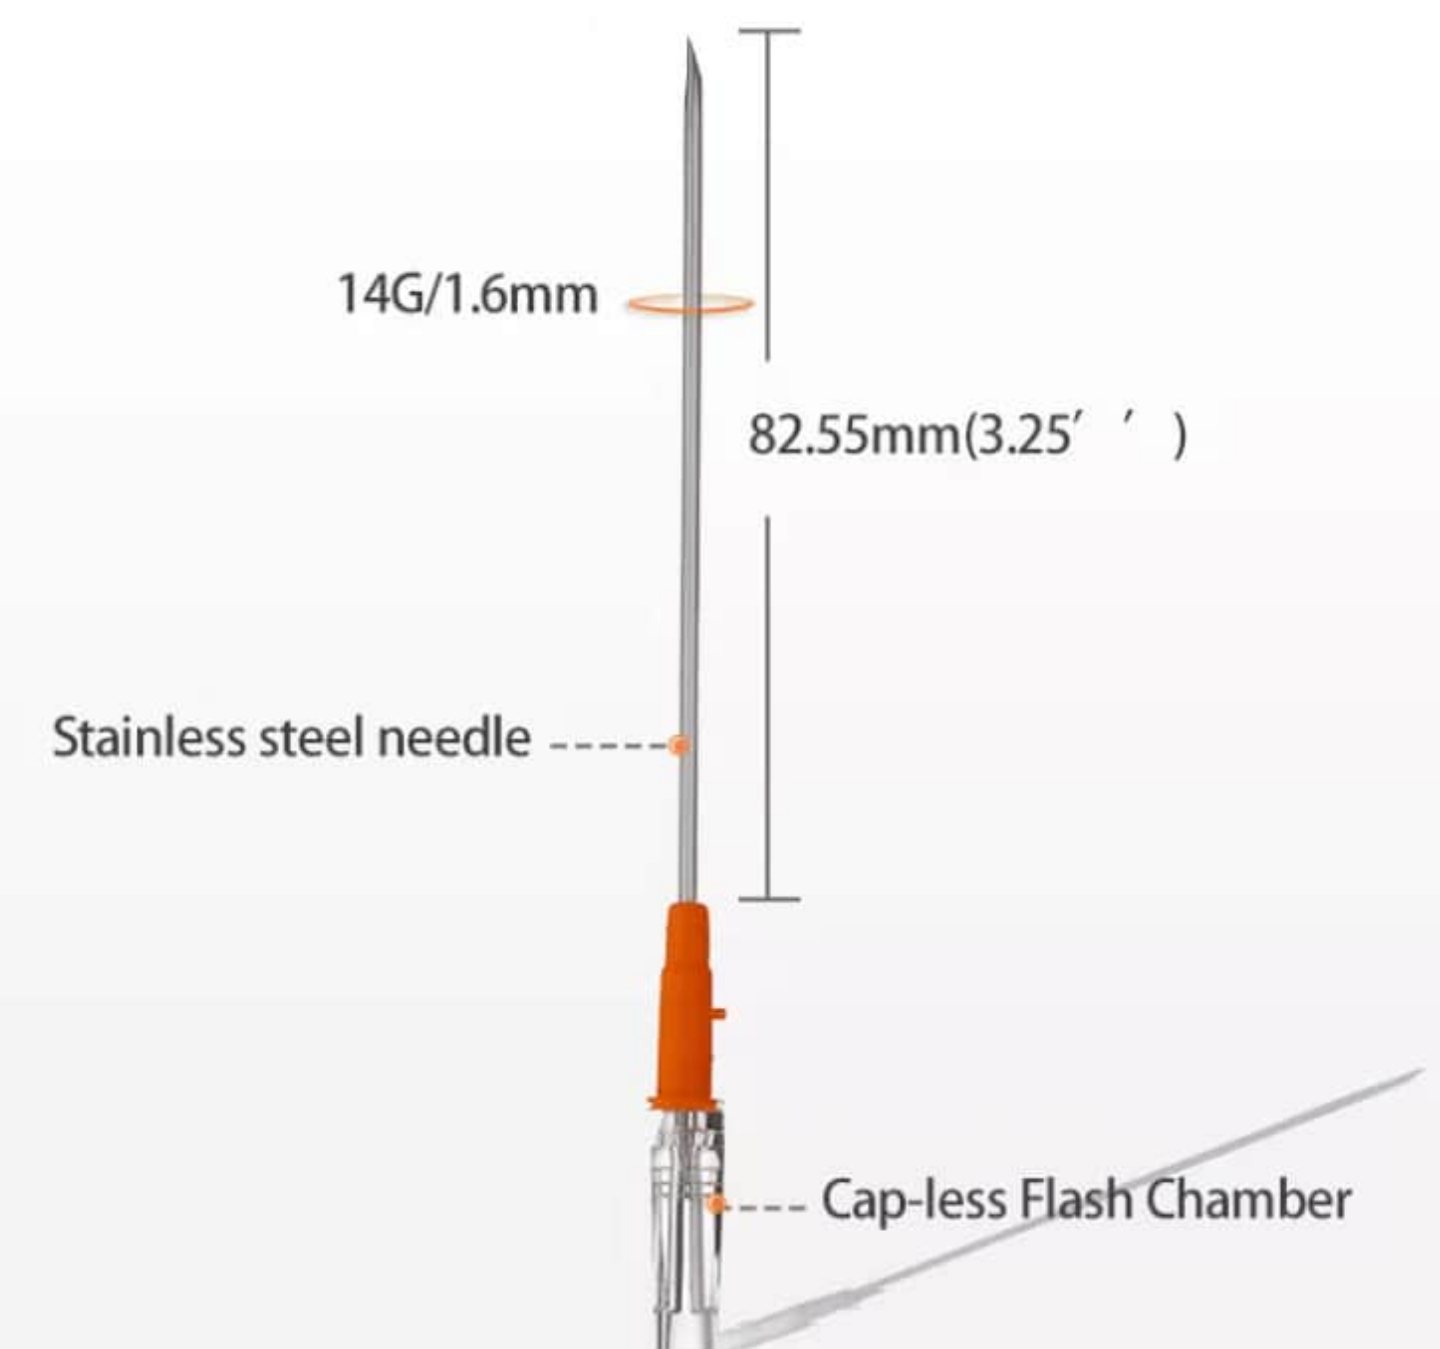

Pneumothorax or airway obstruction are the most common causes of injury-related death after bleeding.

The decompression needle is specially designed to provide first aid for tension pneumothorax in the prehospital stage. Needle kit comes in a special compact case, which, due to its design, is not only convenient to transport and store, but also ensures the sterility of the contents.

PRODUCT ANALYSIS

Chest Seal is an occlusive wound dressing designed to treat open chest wounds. Penetrating injuries to the chest that result in open chest wounds may lead to tension pneumothorax, the second leading cause of preventable death on the battlefield.

Chest Seals are specifically designed with a medical grade hydrogel adhesive strong enough to adhere to skin that is exposed to blood, sweat, hair, sand or water.

Our Chest Seal is available in both a vented and non-vented version.

The 4 vent design maximizes venting and ensures proper chest seal function in the event of an obstruction.

To perform CPR, namely rescue breaths (artificial ventilation of the lungs), a reliable barrier between the rescuer and the victim is necessary.

The most available barrier at this time is a film-valve, which allows you not to touch the victim with your lips, but at the same time effectively carry out artificial ventilation of the lungs.
